Date : December 11, 2009

This actually carries 2 flowers on the stem but an earwig ate most of one. Seed was given to me by Manuel Lima marked [*N. viridiflorus* x Ace of Spades] x *N. viridiflorus* or [*N. viridiflorus* x Eastermoon]. I believe the latter was one of his seedlings bred from *N. viridiflorus* but he did not register it. This is not the 'Ace of Spades' registered by John Reed in 2000, I wish I knew what it was? The flower measures 55 mm across.
