A nice selection of 7, 8 and 10's are flowering here at the moment.

The peachy color of 14\_04MJ only develops when picked and brought inside.

Some jonquilla will flower in the autumn under the right conditions. This one was kept in the shade over summer.

18\_06B is not exactly in flower at the moment. A bird tried to see if it was edible yesterday before it could develop properly.
