I found Little Cuda (6YY) blooming today near Atlanta. This mini came from Michigan from Dr. John Reed I realize it probably thinks it's Spring with the mild weather we've been having. While it's taken a few years to settle down, it's never bloomed this early before. It won't make it to any shows so I thought I'd post it for all to see. It's got great form. It's size is perfect too. I also have Julia Jane (10YY) blooming too but it's always blooming in January
