Tazettas and the jonquil/viridiflorus hybrids like protection, so for me winter is bulbocodium season.

This one may have an intersectional bulbocodium hybrid as a pollen parent.

This one is Gold Step x Viriquilla

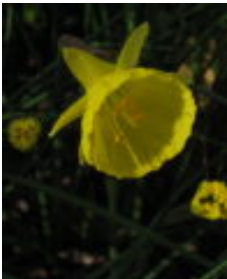

The first of this type of hybrid, Gold Step x [Virition x (Viriquilla x Virivest)] flowered in the autumn before its pollen parent flowered, and matured from greeny yellow to white yellow over a couple of weeks.

There are lots of pure bulbocodiums: -

There are some frills: -

And some spills: -

PS Jolene, I have done a draft article on bulbocodiums and will send it to you once I've checked it.
